The Medical Library is open 8:30am – 4:30pm Monday to Friday.

It has been wonderful to see some regular Library users back in R Block since we have opened. So, come and use the computers, or find a study space, and the Library staff will be ready for any information assistance you may need.

**Featured Resource**

Given the [WNHS Mock Accreditation in November](#), it is timely to point out the NSQHS Standards resources available through the library.

The Standards themselves are no longer available in print format from the Commission. Instead you can access the standards directly from the [Australian Commission on Safety and Quality in Health Care website](#). There are also links to the NSQHS Standards on our [Library Website](#), including links to standards of particular relevance to WNHS. To find them, go to the elibrary tab along the top menu then select Health Statistics / Standards / Strategies / Legislation. Once on that page, select the Standards tab.
Health Libraries Australia has developed a series of expert PubMed live searches based on the 11 topics aligned to the NSQHS Standards. Use these searches to find evidence that supports best practice in line with Australian National Safety and Quality Health Service Standards.

Click on the search link of interest and the search will automatically run in PubMed. If you wish to narrow the search to a particular topic, e.g. Palliative Care in relation to Partnering with Consumers, simply add your search topic followed by the AND operator at the front of the search string.

New Resources

New Ebooks

Access these books online from the links provided (or from the Library catalogue)
